

LETTER OF INTENT

Name: Manal Al-Areqi

Date:

___/___/2026

Company: Badiha (بديهة) — under incorporation

Phone: _____

Email: manal.alareqi@gmail.com

Address: _____, Saudi Arabia

To: Innovation & Entrepreneurship team

Ministry of Investment of Saudi Arabia (MISA)

Al Imam Saud Ibn Abdul Aziz Branch Rd, Al Nakhil, Riyadh 12382, Saudi Arabia

Subject: Letter of Intent to Incorporate in Saudi Arabia

Dear MISA team,

This letter confirms our intent to incorporate in Saudi Arabia and our interest to invest in the local entity we plan to establish. We would like to ask for your support to obtain an Entrepreneur License from MISA. After establishing our local entity, we intend to make the following investments into the Saudi economy:

- Over the next 12 months, our expected CapEx and OpEx investment value into our Saudi entity will be approximately 31,000 USD
- In the next 12 months, the number of people we intend to hire to work for our Saudi entity will be approximately 1 (one)
- Over the next 12 months, our projected cumulative revenues generated by the Saudi entity will be approximately 21,000 USD
- Over the next 5 years, our projected CapEx and OpEx investment value into our Saudi entity will be approximately 850,000 USD
- In the next 5 years, the number of people we intend to hire to work for our Saudi entity will be approximately 6 (six)
- Over the next 5 years, our estimated cumulative revenues generated by the Saudi entity will be approximately 1,180,000 USD

We would like to collaborate with you in executing our incorporation and operationalization plans in Saudi Arabia, and obtaining the required approvals from other government entities.

We are eager to contribute to the aspiring transformation happening in Saudi, and we are looking forward to your support and collaboration.

Sincerely,

Name: Manal Al-Areqi

Title: Founder

Startup Brief

(EN-AR) Company Name:	Badiha — بديهة (trade-name reservation in progress)
Establishment date:	Not yet incorporated. Product in production since 2026; incorporation pending this license.
Website:	https://ma3rifah-ai.vercel.app (temporary URL; custom domain pending the trade-name registration)
Country of Origin (HQ) & branches:	No existing legal entity. The founder is a resident of Saudi Arabia and will incorporate the company in Saudi Arabia (city: _____) as its headquarters. No branches.
Shareholders & their nationalities:	Manal Al-Areqi — 100% — nationality: _____
VCs:	None. Fully bootstrapped and self-funded.
Incubation or acceleration programs:	None to date.
Closed VC rounds, who (VC name), when (date) and how much (\$):	None. No external capital has been raised.
Brief about company: (What kind of business activities included)	An Arabic-first enterprise knowledge platform. Organisations upload their own regulations, policies and procedure manuals; their employees then ask questions in natural Arabic and receive answers generated only from those documents, with the source document and page number cited on every answer. The platform is live in production today. It performs hybrid retrieval (vector plus full-text search tuned for Arabic), repairs the character corruption typical of Arabic PDFs, reads scanned documents and images through OCR, and runs a deterministic verifier that checks every number in an answer against its source text before the answer is shown. Business activities (ISIC4): 620113 (main), 620102, 620111, 582001 — development and operation of a cloud-based (SaaS) knowledge-management platform, sold by monthly and annual subscription to private-sector organisations in Saudi Arabia.
Sector	Information Technology — Enterprise SaaS / Applied Artificial Intelligence (Arabic-first knowledge management)
Competitive advantage:	1. Arabic is the design constraint, not a translation layer:

retrieval, chunking and text repair are built for Arabic documents, and the corruption generic tools introduce when reading Arabic PDFs is detected and repaired before indexing.

2. Every answer is traceable: the source document and page are shown with each answer, and a deterministic (non-model) verifier cross-checks the figures in the answer against the source, so numeric errors cannot pass silently.

3. Tenant isolation is enforced in the database (PostgreSQL row-level security) and proven by 232 automated tests plus mutation testing: the guards are deliberately disabled in a test build and the suite must fail — which it does.

4. Scanned Arabic documents are usable: circulars and manuals that exist only as scans are read page by page and indexed like any other document.
